Five Mile I-5 Pavement Preservation Project Begins *SB1 Funding Brings Much Needed Repair*

LOS ANGELES —The California Department of Transportation (Caltrans) today announced the beginning of a pavement preservation project that is repairing broken slabs along a five mile segment of Interstate 5 between Santa Fe Springs and Commerce. The slab replacement and dig outs between Interstate 605 and Washington Boulevard will require nighttime lane closures.

The three right lanes of northbound and southbound I-5 will be subject to closure for pavement work from **9 p.m. until 5 a.m. Wednesdays and Thursdays, and again from 12:01 a.m. until 8 a.m. on Fridays and 12:01 a.m. until 9 a.m. on Saturdays. Only the far left lane will be open.** Work is weather permitting.

“This I-5 corridor project is possible due to SB 1, which is addressing the backlog of repairs needed across the state highway system to keep people and freight moving,” said incoming Caltrans Director Laurie Berman.

Motorists are advised to plan ahead, use alternate routes and Be Work Zone Alert.

With funding from Senate Bill 1, Caltrans will be replacing 17,000 miles of pavement across the state and 563 lane miles in Los Angeles and Ventura counties. The pavement projects will extend the service life of our roadways, and the fix-it-first approach will help preserve California’s more than 50,000 lane miles of highways and roads.

RV Concrete, Inc. of Anaheim is the contractor on this \$1.7 million project
